

## Access key

### What are access keys

Access keys are keyboard shortcuts that enable to quickly access a website link.

Usually the link connects to a main page of the website. However they can be used to quickly access the research box or return to the beginning of the main content of the page.

Access keys are a combination of keyboards that vary depending on the browser, also in different versions of the same browsers. The following are the most common browsers in use.

## Table Access Key
